

Exhibit 9

Developed Measurable Goals

The goal of the Stormwater Management Procedure Plan (SWMP or Plan) is to set a series of goals intended to improve the management of stormwater. At a minimum, these goals should strive to:

- Reduce flood damage, including damage to life and property;
- Minimize, the impact of stormwater runoff from any new development;
- Reduce soil erosion from any development or construction project;
- Assure the adequacy of existing and proposed culverts, bridges, and other in-stream structures;
- Maintain groundwater recharge;
- Prevent, to the greatest extent feasible, an increase in nonpoint pollution;
- Maintain the integrity of stream channels for their biological functions, as well as for drainage;
- Minimize pollutants in stormwater runoff from new and existing development to restore, enhance, and maintain the chemical, physical, and biological integrity of the waters of the state and community; to protect public health; to safeguard fish and aquatic life and scenic and ecological values; and to enhance the domestic, municipal, recreational, industrial, and other uses of water; and
- Protect public safety through the proper design and operation of stormwater basins.

Short-Term Measurable Goals

To achieve these objectives, Measurable Goals are established to determine the effectiveness of stormwater management practices. The purpose of the Short-Term Measurable Goals is to review the progress made during the previous year and to establish a new set of objectives for the upcoming year. Specific short-term (yearly) goals are established as part of MS4 Annual Report, and may be referenced for a given year within that report, included in Exhibit 8 of the SWMP as well as on the Town's Stormwater web page.

Long-Term Goals

In addition to the quantifiable short-term goals, the Town also seeks to establish long-term qualitative goals with respect the stormwater policy. These goals include:

MCM 1: Public Education and Outreach

Measurable Goals:

- Continue to advance work as a Climate Smart Community.
- Continue to build the Natural Resources Inventory database.
- Update the Waterbodies of Concern list.
- Refine the criteria for Geographic Areas of Concern (GOC) and update GOC mapping.
- Offer more public education opportunities related to stormwater management.

MCM 2: Public Involvement/Participation

Measurable Goals:

- Continue to form committees that include and encourage members of the community to engage in active education and the potential formation of guidelines or regulations associated with multiple issues, including environmental and stormwater concerns.
- Increase efforts to have individual homeowners and business become more active in installing and implementing stormwater management measures on private property.

MCM 3: Illicit Discharge Detection and Elimination

Measurable Goals:

- Continue to conduct inspections of Town waterbodies for signs of illicit discharges, with a goal of inspecting 20%-25% of waterbodies annually.
- Develop and institute an IDDE Program for Building Department and Highway Department personnel.

MCM 4: Construction Site Stormwater Runoff Control

Measurable Goals:

- Implement a more formal and stringent policy regarding SWPPP enforcement, particularly as related to violations.
- Foster a more complete buy-in of the importance of SWPPP measures both during and after construction.

MCM 5: Post-Construction Stormwater Management

Measurable Goals:

- Establish municipal code and clearer requirements for the management of post-construction stormwater management practices.
- Limit or minimize the Town's maintenance obligations for post-construction stormwater management practices.
- Improve the Town's review and inspection policy for post-construction stormwater management practices.
- Improve the manner in which separate post-construction stormwater management practices integrate with one another, particularly in areas where controlled discharges affect Waterbodies of Concern.

MCM 6: Stormwater Management for Municipal Operations*Measurable Goals:*

- Self-assess Best Management Practices (BMPs) for Town Municipal Operations to minimize potential stormwater impacts every three years.
- Incorporate stormwater management philosophies into all municipal department.
